

## Y 970: Improved Formulation / YH 9: 160 g Units available

Mara® Poxy Y has proven itself for the decoration of bottle crates made of pre-treated polyethylene (PE) and polypropylene (PP). The shade Mara® Poxy Y 970 has now been modified in viscosity for the benefit of easier processing.

The improved formula of Y 970 White shows best curing results with an **addition of 160 g Hardener YH 9**. All other properties remain unchanged.

Further tests with the other colour shades have also revealed best crosslinking results with an addition of 160 g hardener per ink unit. This paves the way for a general recommendation of **1 unit ink + 160 g YH 9 for all colour shades**, which simplifies the processing of Mara® Poxy Y significantly!

For this reason, we will offer the hardener YH 9 in 160 g containers in the future. In order to avoid confusion with the 120 g container of hardener YH 9, which will co-exist for the time being, **the 160 g container has a label with a grey background**.

For further information on Mara® Poxy Y please refer to [www.marabu-inks.com](http://www.marabu-inks.com)

### Date of change-over

This change becomes effective starting with **batch 213** (immediately).

**You will find additional remarks on the Y 970 label regarding the improved formulation and the required amount of hardener.**
